About OU Physicians

With nearly 400 doctors, our practice encompasses nearly every adult and child specialty. Many of our doctors have expertise in the management of complex conditions that is unavailable anywhere else in the state, region or sometimes even the nation. Some have pioneered surgical procedures or innovations in patient care that are world firsts.

The OU Physicians building offers a weather-protected entry and free valet parking. Complete laboratory, radiology and pharmacy services are also available here under one roof.

Our Outreach Team — Your Liaisons

Our physician liaisons can assist you with the following as they relate to urogynecology:

- Consultations
- Evaluations and second opinions
- Patient referrals and transfers
- Continuing medical education opportunities
- Updates on new procedures and research

If you would like to meet with one of our physician liaisons at your office or receive help by phone, call 405-271-3322.

Rely On the State’s Only Fellowship-Trained Urogynecologist

This doctor’s expertise attracts some of the most complex cases from Oklahoma and surrounding states. He spends extensive time assessing each patient – often as long as an hour. Assessments include a detailed history, a physical examination and advanced diagnostic testing. In most cases, women are evaluated in a single visit and sent home with treatment plans. We also teach patients to manage their conditions.

The Most Advanced Diagnostic Capabilities in the Nation

Our state-of-the-art diagnostic equipment, which combines imaging technology and pressure tests of the lower urinary tract with nerve studies, enables us to assess the function of all the pelvic organs. Traditional equipment only allows recording isolated pressures from the organs in the pelvis. We provide the following functional and anatomic study diagnostic services in our on-site pelvic floor laboratory:

- Videourodynamics
- Cystoscopy
- Pudendal nerve latency
- Cine-defecography
- Positive pressure urethrogram
- Electromyography
- Fluoroscopy
- Endoanalultrasoundography
- Anal manometry
- Fistulography

A Broad Range of Options

The pelvic and bladder health clinic offers non-surgical treatments, including:

- Physical therapy, including biofeedback training, electrical stimulation and pelvic floor exercises (You can refer patients directly to our physical therapist for care. Most insurance plans cover physical therapy for pelvic floor disorders.)
- Medication
- Behavioral and dietary modifications
- Mechanical devices

When symptoms continue to interfere with daily activities, vaginal, abdominal or laparoscopic surgery may be necessary. We provide rehabilitation and corrective surgery for the following conditions of the female pelvic and reproductive organs:

- Prolapse
- Urinary and fecal incontinence
- Pain syndromes of the bladder or urinary canal
- Neurological diseases of the bladder
- Fistulas in various pelvic organs that can cause urinary and fecal incontinence
- Other problems of the female pelvic floor requiring advanced diagnostics, rehabilitation or corrective pelvic surgery

Ninety-five percent of surgeries performed through the clinic are laparoscopic, vaginal or a combination of the two. Corrective surgeries for pelvic and bladder conditions often are out-patient procedures with small incisions and minimal post-operative pain and recovery time.
